TIPS FOR MANAGING KAJEET HOTSPOTS AND DATA

Because we know how important it is for students to connect to learning.

How much data is included with the hotspot?

- Each Kajeet hotspot includes **30GB of data monthly**. Once 30GB of data has been used, the hotspot will be limited to 500MB per day until the new monthly data cycle begins.

It is highly recommended that users monitor their data usage daily.

- To monitor data usage, go to: *Kajeet.com/status*
 - Follow directions for entering your hotspot information.

Inform you teacher(s) that your connection to classes is through a hotspot.

- Accommodations may be necessary based on available hotspot data.

If the hotspot is running low on data, turn off the iPad camera in Zoom meetings or call in to the meeting by phone.

Muting audio when not speaking uses less data.

The use of virtual backgrounds consumes extra hotspot data. If possible, avoid using virtual backgrounds to conserve data.

Use hotspots for schoolwork only.
